Nutrition, Physical Activity and Obesity **Uzbekistan**

This is one of the 53 country profiles covering developments in nutrition, physical activity and obesity in the WHO European Region. The full set of individual profiles and an overview report including methodology and summary can be downloaded from the WHO Regional Office for Europe web site: http://www.euro.who.int/en/nutrition-country-profiles.

DEMOGRAPHIC DATA	
Total population	27 445 000
Median age (years)	26.2
Life expectancy at birth (years) female male	71.9 65.7
GDP per capita (US\$)	1427.3
GDP spent on health (%)	5.8

Monitoring and surveillance

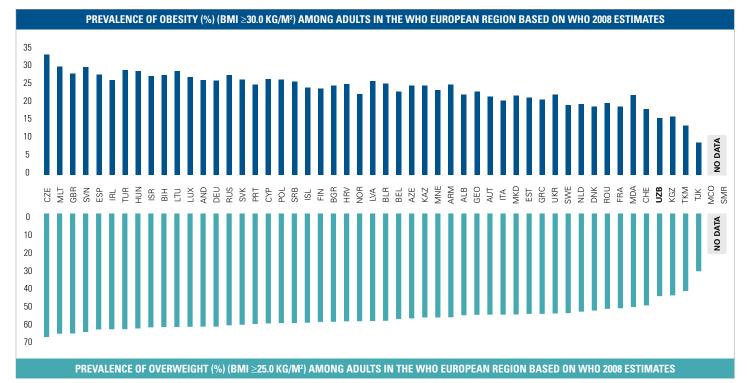

Overweight and obesity in three age groups

Adults (20 years and over)

Intercountry comparable overweight and obesity estimates from 2008 (1) show that 44.2% of the adult population (≥ 20 years old) in Uzbekistan were overweight and 15.1% were obese. The prevalence of overweight was higher among men (45.1%) than women (43.4%). The proportion of men and women that were obese was 12.8% and 17.4%, respectively. Adulthood obesity prevalence forecasts (2010–2030) predict that in 2020, 13% of men and 20% of women will be obese. By 2030, the model predicts that 14% of men and 25% of women will be obese.¹

Adolescents (10–19 years)

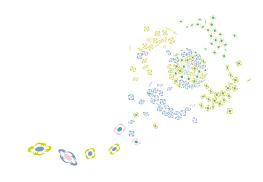

No data are available from the Health Behaviour in School-aged Children (HBSC) survey (2009/2010).

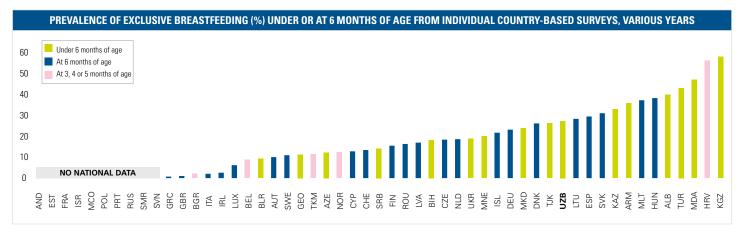

Children (0-9 years)

No prevalence figures are available for overweight and obesity in schoolchildren based on measured intercountry comparable data. Uzbekistan is not yet participating in the WHO European Childhood Obesity Surveillance Initiative (COSI).

Exclusive breastfeeding until 6 months of age

Nationally representative data from 2006 show that the prevalence of exclusive breastfeeding under 6 months of age was 26.4% in Uzbekistan.²

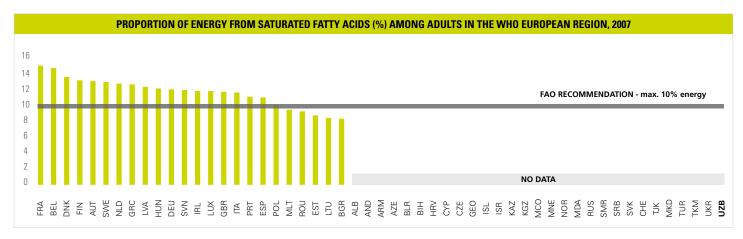

Notes. The country codes refer to the ISO 3166-1 Alpha-3 country codes. Data were derived from country-specific publications on surveys carried out in this field, not as part of a European-wide survey. Due to different data collection methods of the country-specific surveys, any comparisons between countries must be made with caution.

Saturated fat intake

No data are available.

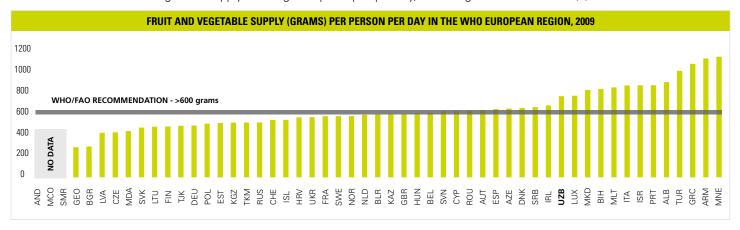

Notes. The country codes refer to the ISO 3166-1 Alpha-3 country codes. Ranking of data was carried out so that country data at the right-hand side of the graph — with values below the FAO recommendation — fall within the positive frame of the indicator. FAO: Food and Agriculture Organization of the United Nations.

Source: FAOSTAT (2).

Fruit and vegetable supply

Uzbekistan had a fruit and vegetable supply of 755 grams per capita per day, according to 2009 estimates (2).

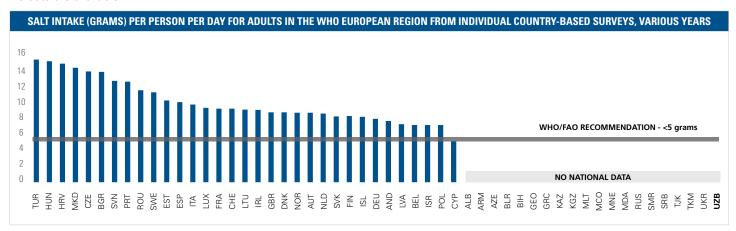

Notes. The country codes refer to the ISO 3166-1 Alpha-3 country codes. Ranking of data was carried out so that country data at the right-hand side of the graph — with values above the WHO/FAO recommendation — fall within the positive frame of the indicator.

lodine status

According to the most recent estimates on iodine status, published in 2012, the proportion of the population with an iodine level lower than 100 µg/L was 39.8% (4, 5).

Physical inactivity

No data are available for the adult population.

Policies and actions

The table below displays (a) monitoring and evaluation methods of salt intake in Uzbekistan; (b) the stakeholder approach toward salt reduction; and (c) the population approach in terms of labelling and consumer awareness initiatives (3).

Salt reduction initiatives

Monitoring & evaluation		Stakeholder approach			Population approach						
				Labelling		(Consumer av	vareness init	iatives		
Industry self-reporting				Specific		Brochure	TV	Web site Software	Education	Conference	Reporting
Salt content in food	xx	Industry involvement	Food reformulation	food		Print	Radio	Suitware	Schools		
Salt intake				category					Health		
Consumer awareness									care facilities		
Behavioural change									idomitioo		
Urinary salt excretion (24 hrs)											

Trans fatty acids (TFA) policies

Legislation	Type of legislation	Measure

Marketing of food and non-alcoholic beverages to children (6)

In 2011, the Ministry of Health banned the sale of energy-dense and nutrient-poor food and beverages in schools and preschools. The *Action Plan of the Strategy for Prevention and Control of Chronic Non-communicable Diseases in Uzbekistan for 2011–2015* contains an action point on this issue (7). Limitations or bans have also been placed on the advertising of unhealthy foods, along with limitations on the sales of unhealthy products in academic institutions and venues for children's sports and entertainment activities.

Physical activity (PA), national policy documents and action plans

Sport	Target groups	Health	Education		Transportation	
Existence of national "sport for all" policy and/or national "sport for all" implementation programme	Existence of specific scheme or programme for community interventions to promote PA in the elderly	Counselling on PA as part of primary health care activities	Mandatory physical education in primary and secondary schools	Inclusion of PA in general teaching training	National or subnational schemes promoting active travel to school	Existence of an incentive scheme for companies or employees to promote active travel to work
~			✓ b	✓a		

^a Clearly stated in a policy document, partially implemented or enforced. ^b Clearly stated in a policy document, entirely implemented and enforced.
