

HEN report uptake summary

HEN publishes synthesis reports that aim to support public health decision-makers in the WHO European Region to formulate health policies based on the best available evidence. To understand how each HEN synthesis report is disseminated, shared, discussed and used and contributes to public health decision-making, the HEN Secretariat analyses of the uptake of each report. The HEN Secretariat assess the short- and long-term (up to one year) reach of each HEN report and summarizes the findings in a brief format.

Title	HEN 54. Evidence on mechanisms and tools for use of health information for decision-making
Published in	WHO Regional Office for Europe website ; NCBI Bookshelf
Authors	Victoria Blessing, Anoushka Davé, Peter Varnai
Analytics covering	<i>November 2017 to October 2018</i>
Data source	WHO/Europe, National Center for Biotechnology Information (NCBI) Bookshelf, Altmetric, Google, Publish or Perish application citation search, Web of Science Cited Reference search

Presented at the following events:

- Autumn School on Health Information and Evidence for Policy-making, 2017

Added values described by commissioners, reviewers and others

This report covers a niche in evidence-informed policy-making and in general focuses on the uptake of research evidence rather than health information in policy

Tanja Kuchenmüller, Unit Leader, Division of Information, Evidence, Research and Innovation,
WHO regional Office for Europe (commissioner).
