Investing for a safe and healthy Bosnia and Herzegovina

WHO Health Emergencies Programme at the country level

Disasters and emergencies disrupt communities and destroy livelihoods - most of all they threaten people's health. In a typical year, Europe suffers economic losses of € 10 billion from disasters and emergencies,¹ which result in hundreds of people dying or becoming severely ill.

Europe's 21st century emergencies include a wide range of hazards:

- Many countries have measles epidemics.
- Crimean-Congo haemorrhagic fever.
- at an unprecedented pace.
- Many countries are prone to floods, heatwaves, forest fires and other more such emergencies in the coming years.
- The threat of earthquakes and other natural disasters in Europe possibly
- Conflicts and terrorist attacks affect European countries directly and as spill-over effects from neighbouring countries and regions.

• Countries in southern, central and eastern parts of the Region have outbreaks of vector-borne diseases, such as West Nile Virus and

• All national health systems in the European Region have to respond to outbreaks of foodborne diseases, and antimicrobial resistance is growing

extreme events. Climate change means Europe is likely to see many

combined with chemical or nuclear contamination – never goes away.

Estimate quoted in EFDRR. High-Level Dialogue Communiqué from 2017. European Forum for Disaster Risk Reduction, Istanbul, 26–28 March 2017. Geneva: European Forum for Disaster Risk Reduction; 2017. (https://www.preventionweb.net/files/52533_2017efdrrhlcommuniquefinal.pdf, accessed 23 August 2019).

The European Region is part of a highly interconnected world. Diseases can spread at the speed of an aeroplane, and people fleeing emergencies often cross international frontiers. Recent striking examples of international emergencies with repercussions in Europe are the outbreaks of the Ebola and Zika viruses, and the Syrian humanitarian crisis.

Bosnia and Herzegovina: The case for action

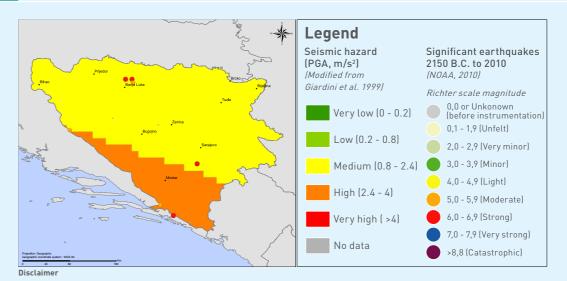

Bosnia and Herzegovina is exposed to significant natural hazards: particularly floods and earthquakes. It has experienced conflict and political unrest in its recent history. More recently, it has become a transition country for people displaced by conflict in the Syrian Arab Republic. Bosnia and Herzegovina recognizes that the country's health emergency capacities need to be strengthened. This is why it is one of the WHO Health Emergencies (WHE) Programme priority countries in the European Region

The WHE Programme will continue to scale up support to priority countries and territories to help them to strengthen their International Health Regulations (IHR) core capacities. Each of the priority countries faces significant hazards, and each has vulnerabilities in their health emergency response capacities. This means health emergencies can have a high impact in these countries and territories. It also means they are the places in the Region where investment in IHR core capacities can produce the greatest return.

Key emergency threats in Bosnia and Herzegovina • Earthquake and flood hazards (Maps 1 and 2) • Outbreaks and epidemics • Drought • Conflict and political unrest

Bosnia and Herzegovina: Flood hazard map³

Bosnia and Herzegovina is striving to achieve Universal health coverage (UHC), in line with the UN's Sustainable Development Goals (SDGs). Investing in health emergency capacities supports the country's progress towards these and other SDGs. The investment will safeguard social and economic progress, by reducing the impact of emergencies when they happen.

"Universal health coverage and health emergencies are two sides of the same coin"

Dr Tedros Adhanom Ghebreyesus

Universal health coverage and health emergency capacity, or emergency preparedness, are two sides of the same coin in a people-centred health system. When countries strengthen their emergency preparedness and response capacities, they also strengthen their health system's ability to provide universal health coverage. In the same way, when countries strengthen their health systems, they strengthen their capacity to be prepared for and respond to emergencies. True universal health coverage means people can access quality, affordable, safe and culturally sensitive life-saving services when they need them most – including when they have been hit by an emergency.

Director-General of World Health Organization

³ lbid.

Investing in emergency preparedness makes 2 вох economic sense

Many health emergencies are partly or fully preventable. Where they are not, harm can often be reduced through prevention, preparedness, early detection and rapid response.

Total global investment required over the coming five years to effectively prepare for, prevent, detect and respond to health emergencies is estimated at US\$ 28.9 billion. Success will be measured against the goal of better protecting at least 1 billion more people from health emergencies and providing life-saving health services to 100 million vulnerable people. It will save approximately 1.5 million lives and provide estimated economic gains of US\$ 240 billion.

Extract from A Healthier Humanity: The WHO Investment Case for 2019-20234

The return on investment is US\$ 8.30 for every US\$ 1 provided - a more than eightfold return. The investment pays back in multiple ways:

- it saves people, society, economy from the next emergency
- it strengthens the health system
- it helps to meet several Sustainable Development Goals
- it contributes to global efforts to protect 1 billion more people worldwide.

3

Investing in health emergency preparedness is key to achieving the SGDs

Investing in health emergency preparedness and response is key to achieving SDG 3 "Ensuring healthy lives and promoting the wellbeing at all ages is essential to sustainable development". It is particularly relevant to target 3.D, which deals with strengthening health emergency capacity, and targets 3.1 (maternal mortality); 3.2 (infant mortality); 3.8 (universal health coverage) and 3.9 (deaths from chemical contamination).

Investment in health emergency capacity also plays an important role in achieving other SDG goals such as: eliminating poverty and hunger (SDG 1, SDG 2); gender equality (SDG 5); decent work and economic growth (SDG 8); reduced inequalities (SDG 10); Climate Change (SDG 13); and Peace, justice and strong institutions (SDG 16).

The International Health Regulations: a framework to protect people from health emergencies вох

Since 2007, the IHR have made a difference to the way the world prepares for and responds to emergencies. The IHR (2005) is a central mechanism within the WHE Programme to guide countries towards achieving common approaches and capacities to detect, assess and respond to health threats. The IHR (2005) is a legally binding treaty signed by all WHO Member States. What it commits them to is:

- 1. Sharing information with WHO, and each other, about all hazards - disease outbreaks and other health threats (e.g. chemical or nuclear contamination) – that could spread across international borders.
- 2. Developing and maintaining the core capacities needed to prepare for, detect and respond to disease outbreaks, and other health threats.
- 3. Reporting annually on their implementation of the IHR.

The IHR have already strengthened international cooperation and country capacities to deal with health emergencies. Nonetheless, many Member States in the European Region, and indeed around the world, have scope to further strengthen their IHR core capacities.

For more information about the IHR see:

https://www.who.int/topics/international_health_regulations/en/

Bosnia and Herzegovina emergency preparedness and response capacities

6 BOX

Overview of IHR monitoring and evaluation in Bosnia and Herzegovina

Four complementary components of monitoring and evaluation help to provide a comprehensive overview of the current status of IHR country capacities.⁵ The States Parties Annual Reporting is mandatory; the Joint External Evaluation (JEE), After Action Reviews (AARs) and Simulation exercises are voluntary.

In particular the JEE fosters a peer-to-peer discussion between international and national experts to identify strengths and weaknesses in emergency preparedness and response within the national health system. Results and recommendations from these activities are the basis for the development of a National Action Plan for Health Emergency Preparedness.

Done or in process:

- States Parties Annual Reporting: 2019
- Joint External Evaluation: planed for 2020/2021

Recommended:

- After Action Reviews
- Simulation exercise
- Action Plan for Health Emergency Preparedness

Highlights from Bosnia and Herzegovina's 2019 self-assessment report on its IHR core capacities

Analysis of its annual reporting data for 2019 shows the IHR core capacities with most room for improvement in Bosnia and Herzegovina are currently:

- Zoonotic events and the Human-animal interface
- Human Resources
- Risk Communication
- Chemical events
- National Health Emergency Framework
- Surveillance

WHO. IHR Monitoring and Evaluation: A Key Element for Public Health Emergency Preparedness and Response. Copenhagen: WHO Regional Office for Europe; Europe; 2018 (http://www.euro.who.int/__data/ assets/pdf_file/0006/375819/IHR-Brief_WEB.pdf?ua=1, accessed 23 August 2019).

Bosnia and Herzegovina's: health emergency preparedness initiatives

Public health and emergency management

A Multi-Hazard National Public Health Emergency Preparedness and Response Plan is developed and implemented Infection prevention and control (IPC)

Infection prevention and control (IPC)

An IPC programme and water, sanitation and hygiene (WASH) standard for infectious diseases are under development.

Risk communication

The Regional Office has launched an Emergency Risk Communication (ERC) five-step package⁶ for tailored support to each enrolled country to scale up their capacity in this area, by developing, testing and adopting their ERC national plan under the IHR. Bosnia and Herzegovina completed steps 1 to 3 of the ERC capacity-building package including training, capacity mapping and plan writing (tailored to the needs of each entity).

Opportunities for further progress

Bosnia and Herzegovina is showing political commitment to health emergency capacities. In the context of implementing the IHR (Box 4), it has volunteered to undergo a Joint External Evaluation (JEE) of its health emergency core capacities planned for 2020/2021.

Bosnia and Herzegovina has a complex and highly decentralized administrative structure. The process of preparing for, and then going through, a JEE gives the country and its partners a clearer insight into Bosnia and Herzegovina's current level of health emergency capacity. It will also give them recommendations from international experts on where and how Bosnia and Herzegovina's capacities need to be strengthened – including three or four top priority recommendations.

The JEE report and its recommendations will provide the basis for Bosnia and Herzegovina to develop a countrywide Action Plan for Health Emergency Preparedness. This should set out a multi-year plan for strengthening IHR core capacities, and provide the resources needed to keep them sustainable and robust in the long term.

Once the Action Plan is in place and being implemented, there is a clear strategy supported by domestic resources. WHO and international partners will then be in a good position to identify areas where they can offer support or additional resources for strengthening IHR core capacities in Bosnia and Herzegovina.

Success stories

Strengthen surveillance of seasonal influenza

The US Centers for Disease Control and Prevention recently funded a project with WHO to strengthen countrywide surveillance of seasonal influenza in Bosnia and Herzegovina. Prior to the project, Bosnia and Herzegovina had challenges in reporting countrywide surveillance data to WHO and WHO Regional Office for Europe's FluNet. By working with public health professionals in the different administrative entities, WHO helped the country implement a countrywide surveillance system. This has meant that since the 2018–2019 influenza season, Bosnia and Herzegovina has been able to report data on a weekly basis to EuroFluNet.

Protecting people from health emergencies together: The way W(H)E work

The WHE Programme is providing the Organization's response to increasingly demanding crises. Mainstreamed across all levels of the Organization, it is geared to better protect people from health emergencies by establishing peoplecentred health systems which can detect, assess, communicate and respond to crises in a matter of hours.

Since each country is unique, the Programme tailors its support to countries' specific hazards, vulnerabilities and systems. It recognizes that structures and people with the right skills need to be in place where disease outbreaks occur, where disasters and conflicts strike, and where people fall sick and die. Therefore the Programme places countries at its centre.

The health emergency management cycle defines the rhythm of the Programme. Its four phases - prevention, preparedness, response and recovery - are grounded in the requirements of the IHR and seamlessly complement each other to save lives. Here's how it works:

- example help prevent outbreaks in the first place.
- communities to communicate risks.
- health services, leaving no one behind.
- future.

1. **Prevention** and control of infectious diseases – through vaccination, for

2. At the same time, countries need to develop, test and evaluate their national plans and strengthen their capacities to be **prepared** for the next emergency of any type. This includes, for example, assessing hospitals for safety and functionality, establishing a laboratory network of excellence, setting up systems for disease surveillance, and engaging

3. During the **response**, life-saving health interventions and pre-positioned essential health packages are delivered in collaboration with health partners to ensure that affected populations have timely access to quality

4. The **recovery** phase is the time to learn from experience and build back better; it is the opportunity to make health systems stronger for the Bridging health emergencies and universal health coverage – two sides of the same coin – will pave the way for countries to achieve the related Sustainable Development Goals. To make this a reality, the WHE Programme has tailored the global strategy into a European Action Plan. The Plan bonds countries with comparable levels of capacity and capability to avert or respond to emergencies. This requires cooperation across sectors and across borders.

As a strong believer in partnership, WHO invites all governments, sectors, partners and people in the European Region to implement the Action Plan jointly. Together we have the expertise and know-how, and together we can support global efforts to prevent, prepare for, respond to and recover from all health emergencies, while contributing to protecting 1 billion more people worldwide.

The WHO Regional Office for Europe

The World Health Organization (WHO) is a specialized agency of the United Nations created in 1948 with the primary responsibility for international health matters and public health. The WHO Regional Office for Europe is one of six regional offices throughout the world, each with its own programme geared to the particular health conditions of the countries it serves.
