

RUBELLA

is a **contagious** disease that can lead to **miscarriage, early delivery** or **birth defects**.

Babies of unvaccinated women **remain at risk** as long as rubella is circulating anywhere in the WHO European Region

DID YOU KNOW...

9 out of 10 women infected with the rubella virus early in pregnancy will lose their baby, or it will be born with congenital rubella syndrome.

Children born with congenital rubella syndrome can suffer from **brain damage, hearing impairment, eye and heart defects**.

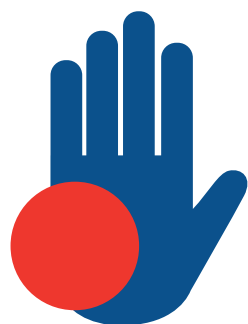

Rubella vaccines are **safe** and **effective**. They undergo rigorous testing and have a very good safety record after nearly **50 years** of use.

Vaccination provides nearly **100% protection** against rubella, and has led to a drastic reduction in rubella cases.

YOU CAN STOP RUBELLA

Protect the next generation by making sure you and your family are **fully vaccinated**.
