

Use of Measles (M), Mumps(M) and Rubella(R) containing vaccines, WHO European Region, 2001

Use of Measles (M), Mumps(M) and Rubella(R) containing vaccines, WHO European Region, 2006

Vaccine schedules vary across WHO European Region, but immunization strategy shows more similar traits than differences.

So, if in 2001 there were still four countries giving the first dose of measles containing vaccine (MCV) before the child's first anniversary (Romania, Turkey, Turkmenistan, and Uzbekistan), in 2006 all countries gave the first dose of MCV at or after child's first anniversary.

The age at which the second dose of MCV was given ranged 1.5 to 13 years in 2001 and 1 to 13 years in 2006, but the median age was 6 years for both 2001 and 2006.

Country	Measles cases in 2007				Last measles case (month/year)	Rubella cases in 2007				Last rubella case (month/year)

*Data reported to WHO by EUVAC.net

Suspected cases reported but not yet classified are shown in the column "Clinical"

Green cells: timely reporting (before 25th of March).
Orange cells: late reporting (after 25th of March).
Red cells: no report received for March.
