

## HEN Report Uptake Summary

HEN publishes synthesis reports that aim to support public health decision-makers in the WHO European Region to formulate health policies based on the best available evidence. To understand how each HEN synthesis report is disseminated, shared, discussed and used, and then contributes to public health decision-making, the HEN Secretariat analyses the uptake of each report. The Secretariat assesses the short- and long-term (up to one year) reach of each HEN report and summarizes the findings in a brief format.

Title	<b>HEN 56. What constitutes an effective and efficient package of services for the prevention, diagnosis, treatment and care of tuberculosis among refugees and migrants in the WHO European Region? Themed issues on migration and health, VIII</b>

### Other notable mentions

#### Added values described by commissioners, reviewers and others

The report was very well structured. It offered good intradocumentary guidance, helping the reader to understand the topic and cross-reference within the report. It was easy to jump between different sections. The report was also very relevant to the technical unit's work in the WHO European Region.

*Martin van den Boom, Technical Officer, Joint Tuberculosis, HIV and Viral Hepatitis programme, WHO Regional Office for Europe*
