Europe

# Core Health Indicators in the WHO European Region

Special focus:  
human resources for health

I am pleased to present the fourth edition of a key annual statistical publication for the WHO Regional Office for Europe: *Core health indicators in the WHO European Region 2015*.

This publication provides selected data on the health situation in the 53 Member States of the Region, including an annual overview of the Health 2020 indicators. The information is compiled from data generated nationally by health and statistical authorities and regionally by WHO and other international agencies. The data are presented in table format for easy reference.

Core health indicators comprise a relatively short and succinct list of key health statistics broadly covering the main health domains: health status of the population, main determinants of health and risk factors, and health system resources and utilization. The publication also includes selected background demographic and socioeconomic indicators.

The ongoing implementation of Health 2020 is improving health in the Region. Between 2010 and 2012, premature mortality from four major noncommunicable diseases fell by 2.2% annually, well beyond the set target of 1.5%. The reduction is larger for males than for females (2.3% vs. 2.1%), contributing to the decline in inequalities between the sexes. Although the health situation in the Region continues to improve in many aspects there are still important challenges ahead. Member States recognize that timely and high-quality health information is essential

to monitor trends and evaluate the Health 2020 policy. The *Core health indicators in the WHO European Region* series aims to satisfy these needs by providing basic country and regional information.

Following the example of previous editions, the 2015 publication presents a special theme. This year, the focus is on human resources for health, which is particularly relevant for two reasons. Firstly, human resources are the cornerstone of the health system in any country, and the planning, regulation and management of the health workforce require extensive intersectoral collaboration – both topics are at the heart of the Health 2020 policy. Secondly, robust and reliable databases on the health workforce need to be built up in each country to allow for proper analysis and planning. At the regional level, the data are collected under the umbrella of the European Health Information Initiative as part of the joint data collection by the Regional Office, the Statistical Office of the European Communities (Eurostat) and the Organisation for Economic Co-operation and Development (OECD), which aims to reduce the reporting burden on Member States and to increase the comparability and consistency of health information in Europe.

I am pleased to present this publication and count on the continued support of our Member States to generate the high-quality information required to monitor progress with the Health 2020 targets.

**Zsuzsanna Jakab**

WHO Regional Director for Europe

# Selected Health 2020 indicators: trends over time and associations

## Measles vaccination coverage, 2013

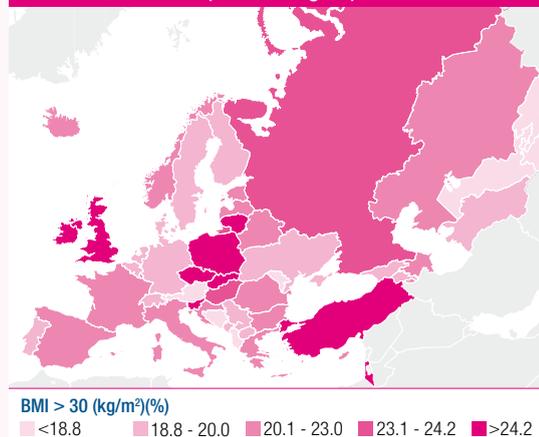

## Mortality from selected noncommunicable diseases, ages 30–69 years

## Association between life satisfaction and infant mortality

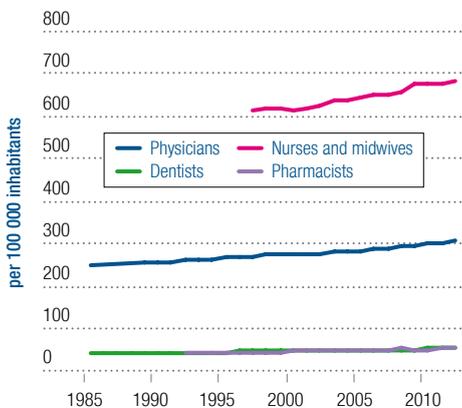

## Prevalence of obesity (BMI > 30 kg/m²)

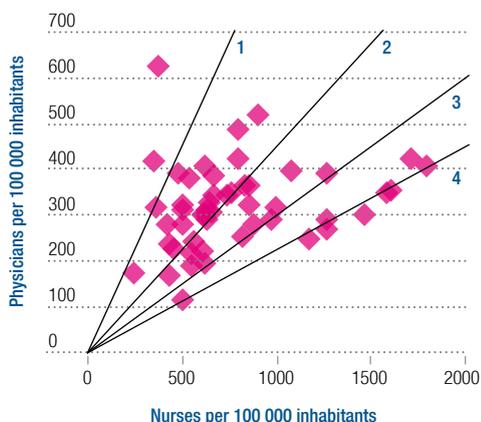

\* The ISO abbreviation for the former Yugoslav Republic of Macedonia

# Theme in focus – human resources for health: selected indicators in the WHO European Region

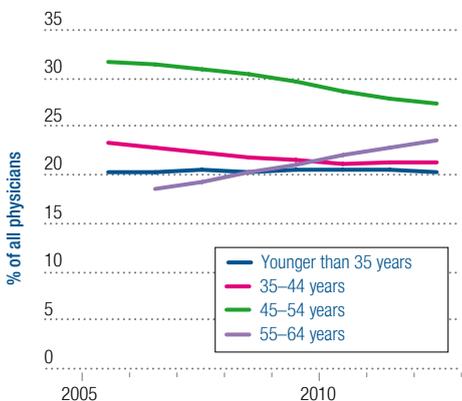

### Availability of human resources for health

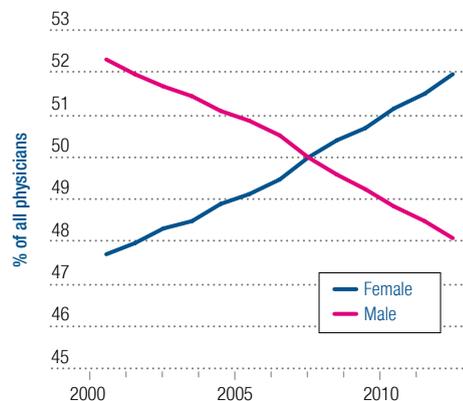

### Nurse : physician ratio by country

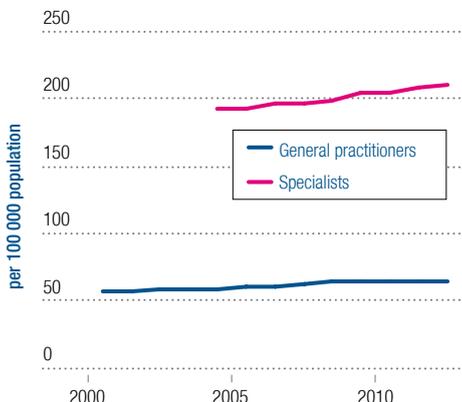

### Physicians by age

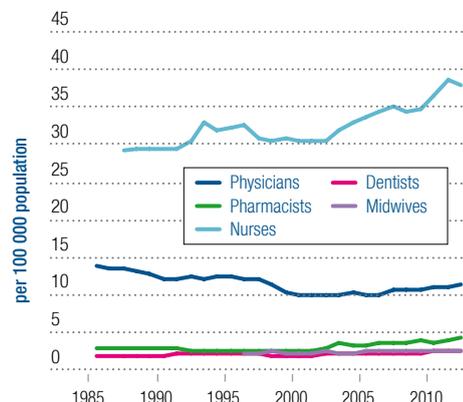

### Physicians by sex

### General practitioners and specialists

### Graduates in selected categories of health personnel

The data for the core health indicators were compiled, validated and processed in a standard way by EUROSTAT, OECD, WHO and other United Nations agencies and international networks, to improve the international comparability of the statistics. Nevertheless, many factors may influence the accuracy and comparability of national statistics, such as variations in definition, incomplete registration and other national specificities in data recording and processing. The international comparison of indicators should, therefore, always be interpreted with caution.

Eight mortality-based indicators (life expectancy at birth and at age 65 years, disaggregated by sex, and rates for infant and maternal mortality) are presented, based on official mortality data from countries.

Cause-specific mortality rates (indicators 18–24) are age-standardized death rates, calculated using the European standard population structure.<sup>1</sup> Age standardization improves international comparability by removing the effects in mortality rates of differences in population age structures between countries. The proportion of

ill defined causes of death is used as an indication of the quality of the certification and coding of causes of death.

The bottom row in the data tables (the WHO European Region) gives the population-weighted average for all countries in the Region for which data are available. The exception is indicator 1, mid-year population, where the value is the sum of the countries' populations.

Health 2020 indicators and indicators related to the Millennium Development Goals (MDGs) are indicated as such.

Data were retrieved from the WHO European Health for All database or the European database on human and technical resources for health, unless specified otherwise in the table below. The data presented were limited to the years 2005–2014 for the sake of actuality and comparability.

Additional indicators and more detailed data can be found in the databases on the websites of the WHO Regional Office for Europe<sup>2</sup> and WHO headquarters.<sup>3</sup>

Indicator	Data source
1,2,3,4	National data reported by countries directly to WHO or, when unavailable, <i>World population prospects: the 2012 revision</i> , from the United Nations Department of Economic and Social Affairs, Population Division
3	Reports of the World Bank, the United Nations Development Programme and country statistical yearbooks
5	<i>World urbanization prospects: the 2011 revision</i> from the United Nations Department of Economic and Social Affairs, Population Division
8, 9	<i>The World Development Indicators</i> database of the World Bank
34-37	WHO estimates based on nationally reported data and data or estimates from the International Monetary Fund, the World Bank, the United Nations and OECD
39-41	The WHO <i>Global Health Observatory</i>
	Data on life satisfaction was taken from the <i>Human development report, 2011</i> , United Nations Development Programme and from the EUROSTAT database
